

IPL Technology

How it works

IPL delivers pulses of broad-spectrum light, targeting melanin (pigment), hemoglobin (blood vessels), and bacteria.

The heat energy damages unwanted pigment or blood vessels, which the body then clears naturally.

Unlike lasers, IPL is non-ablative, meaning it doesn't remove layers of skin, making it a gentler option with minimal downtime.

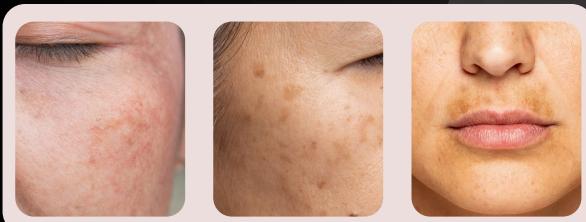

Treatments

IPL targets excess melanin, breaking it into smaller particles for the body to clear.

✓ Effective for sunspots, freckles, age spots, and melasma (if used carefully).
✓ Helps improve overall skin tone and brightness.

Best For:

Fitzpatrick I-IV (light to medium skin tones)
Sun-damaged skin, age spots, uneven tone

Vascular Lesions (Spider Veins, Rosacea, Redness, Broken Capillaries)

- ✓ IPL targets hemoglobin in blood vessels, causing them to collapse and fade.
- ✓ Works for facial redness, broken capillaries, spider veins, and rosacea.
- ✓ Reduces flushing and inflammation over time.

Best For:

Rosacea, spider veins, facial redness
Leg veins (small superficial ones, not deep varicose veins)

IPL Skin Rejuvenation – Improves Texture & Brightness

- ✓ Stimulates collagen production, improving fine lines and skin texture.
- ✓ Reduces enlarged pores and dull skin.
- ✓ Provides an overall glow and even skin tone.

Best for:

Dull, uneven skin tone
Early signs of aging (fine lines, enlarged pores, mild sagging)

IPL for Acne & Acne Marks

- ✓ IPL targets P. acnes bacteria, reducing active breakouts.
- ✓ Shrinks sebaceous glands, leading to less oil production.
- ✓ Helps with post-inflammatory hyperpigmentation (PIH) and redness from acne scars.

Best for:

Oily, acne-prone skin
Red acne scars (not deep atrophic scars)

IPL Hair Removal

- ✓ IPL targets melanin in hair follicles, damaging them to prevent regrowth.
- ✓ Best for light to medium skin tones with dark hair.
- ✓ Covers larger areas faster than laser hair removal, making it great for full-body treatments.

Best for:

Lighter skin (Fitzpatrick I-III) with dark hair
Full-body hair removal (legs, arms, back, chest, underarms)

Radiant Pulse offers treatments using IPL and YAG laser technology that can resolve various skin problems

such as

Fitzpatrick I-IV	Spider Veins
Sun-damaged skin	Rosacea
Age spots	Redness
Uneven tone	Broken Capillaries
Leg Veins	Oily, acne-prone skin
Sunspots	Red acne scars
Freckles	Fine lines
Age spots	Enlarged pores
Melasma	Mild sagging
Post-pregnancy belly, arms, thighs	Fine lines
Early-stage stretch marks	Crepey skin
	Atrophic (indented) scars
	Surgical & Trauma scars
